1	Review of minutes of last meeting conducted on 26/06/2019.	Dr. Nakate
2	Microbiological surveillance of Operation theatres – When to perform?	Dr. Nakate	<ul style="list-style-type: none"> • Can be done once the cleaning and disinfection procedures & fumigation (fogging) is complete. • It can also be done randomly in between two surgeries. • It is advisable to send OT swabs once in a month at least. 	OT staff
3	How to collect sample for air quality monitoring?	Dr. Nakate	<ul style="list-style-type: none"> • Keep the ventilation / air conditioning on for at least half an hour before collecting material for culture. • Expose two Blood agar / Nutrient agar plates, one near the vicinity of the operating table and the second near the air vent (a procedure to be followed till air samplers are made available) by opening the Petri dish for 30 minutes. • Close the Petri dishes after 30 minutes of exposure and send to Microbiology laboratory after labeling. 5	Some important points	Dr. Nakate	<ul style="list-style-type: none"> • If the procedures for cleaning, disinfection and fumigation have been followed adequately, one need not wait for the reports. • However, if there is growth reported in any of the areas, the site should be disinfected again; preferably with 1% Bacillocid special, allowed to dry before used. • If growth is in environmental monitoring as in exposed blood agar plates, area should be aerosolized with any rapid disinfectant. (eg. Bacillocid, Ecoshield etc.) • Anaerobic cultures are required only after known gas gangrene cases are operated. Report will be available after 3 days if the procedures for washing and disinfecting have been followed scrupulously. one need not wait for the report of culture. • Fumigation is not required after surgeries on suspected gas gangrene patients/ other high risk patients. However thorough cleaning, washing with detergent and disinfection of the areas (operating table, floor, basins, trolleys etc.) is mandatory. • For theatres with air handling units, engineering controls should be monitored weekly. 3	Which are different Air borne infections? How they impact on health?	Dr. Ramesh Kadam	<ul style="list-style-type: none"> • Air borne infection occurs when droplet nuclei <5µm in size are disseminated in air. • Droplet nuclei are the residuals of droplets and when suspended in the air, dry & produce particles ranging in size from 1 to 5 micron. These particles can remain suspended in air for longer periods of time. • Common diseases which spread by this mode include open/active pulmonary tuberculosis, measles, chicken pox, hemorrhagic fever with pneumonia, H1N1 (swine flu) etc. • Among these some infections result into fetal out come in patients. Most of these infections are communicable. They can be easily transmitted to health care provider as well as care takers or other patients through droplets (mainly in case of delay in diagnosis & in absence of proper airborne infection control measures in health care settings)

Minutes of the meeting:

Sr. No.	Issue discussed	Raised/told by	Action suggested	Responsibility & date
1	Review of minutes of last meeting conducted on 11/10/2017.	Dr. Nakate
2	Agenda for present meeting was discussed.	Dr. Nakate
3	Aseptic techniques to be followed before injections/infusions by HCW's	Dr. Nakate	<ul style="list-style-type: none"> • Perform hand hygiene before accessing supplies, handling vials and IV solutions, and preparing or administering medications. • Use aseptic technique in all aspects of parenteral medication administration, medication vial use, injections, and glucose monitoring procedures. • Store and prepare medications and supplies in a clean area on a clean surface. • Never store needles and syringes unwrapped because sterility cannot be ensured. • Discard all opened vials, IV solutions, and prepared or opened syringes that were involved in an emergency situation. • Avoid contacting sterile drugs and sterile areas of devices and containers with non-sterile objects. 	All doctors and nursing staff
4	Precautions about IV solutions	Dr. Nakate	<ul style="list-style-type: none"> • Never use IV solution containers (e.g. bags, bottles) to obtain flush solutions or for any other purpose for more than 1 patient. • Never use infusion supplies, such as needles, syringes, flush solutions, administration sets, or IV fluids, on more than 1 patient. • Prepare IV solutions and medications as close to administration as feasible. • Disinfect IV ports and vial stoppers by wiping and using friction with a sterile 70% isopropyl alcohol, ethyl/ethanol, iodophor or other approved antiseptic swab. Allow the port to dry 	All doctors and nursing staff

DEAN

			<p>before accessing.</p> <ul style="list-style-type: none"> Do not use spiking devices, even if they have a 1-way valve, to remove fluid from IV bottles/bags for multiple uses or patients. 	
5	Proper flushing techniques and care	Dr. Nakate	<ul style="list-style-type: none"> Use single-dose containers for flush solutions, whenever possible. If a multi-dose vial must be used, use it for only 1 patient and then discard it. Each entry into the multi-dose vial (dedicated to that patient) must be made with a new, unused sterile needle and new, unused sterile syringe. 	All doctors and nursing staff
6	Appropriate use of syringes	Dr. Nakate	<ul style="list-style-type: none"> Remove the sterile needle/cannulas and/or syringe from the package immediately before use. Never use a syringe for more than 1 patient even if the needle has been changed between patients. Changing the needle but not the syringe is unacceptable. Use a new syringe and a new needle for each entry into a vial or IV bag. Utilize sharps safety devices whenever possible. Discard syringes, needles, and cannulas after use directly on an individual patient or in an IV administration system. Dispose of used needles/syringes at the point of use in an approved sharps container. Do not prepare medication in one syringe to transfer to another syringe, i.e., nurse draws up solution into syringe then transfers the solution to a syringe with plunger removed or injected into the bevel of the syringe to then be injected into the patient. Never store or transport syringes in clothing or pockets. Prepare syringes as close to administration as feasible. 	All doctors and nursing staff

DEAN

7	Care of vials	Dr. Nakate	<ul style="list-style-type: none"> • Always follow the manufacturer's instructions for storage and use. • Use single-use or single-dose vials whenever possible. • Always use a new sterile syringe and new needle/cannula when entering a vial. Never enter a vial with a syringe or needle/cannula that has been previously used (eg, to inject a patient or access a medication vial). • Cleanse the access diaphragm of vials using friction and a sterile 70% isopropyl alcohol, ethyl alcohol, iodophor or other approved antiseptic swab. • Allow the diaphragm to dry before inserting any device into the vial. • Discard single-dose vials after use. Never use them again for another patient. • Discard any vial that has been placed on a contaminated surface or a used procedure tray or that has been used during an emergency procedure. • Use multi-dose medication vials for a single patient whenever possible and access all vials using a new sterile syringe and new needle/cannula adhering to aseptic technique. • Keep multi-dose vials away from the immediate patient environment. • Never store or transport vials in clothing or pockets. • Never pool or combine leftover contents of vials for later use. • Never leave a needle, cannula, or spike device (even if it has a 1-way valve) inserted into a medication vial rubber stopper because it leaves the vial vulnerable to contamination. • Inspect vials and discard if sterility is known or 	All doctors and nursing staff

			<p>suspected to be compromised. Examine the vial for any particulate matter, discoloration, or turbidity; if present, do not use and discard immediately.</p> <ul style="list-style-type: none"> • All vials used during an emergency should be discarded because sterility cannot be guaranteed. 	
10	The next HICC meeting was scheduled in the March 2018.	Dr. Nakate
11	The secretary thanked all the members for their valuable contributions and the meeting was concluded.	Dr. Nakate

1	Review of minutes of last meeting conducted on 13/06/2017.	Dr. Nakate
2	Agenda for present meeting was discussed.	Dr. Nakate
3	Importance of hand hygiene in ICU, NICU & PICU.	Dr. Nakate	Follow appropriate hand hygiene practices before and after touching patients and in between two patients.	All doctors and nursing staff
4	Common towels for drying washed hands at hand washing areas are frequently contaminated and are potential sources of HAI.	Dr. Nakate	Use of common towels should be discouraged. Instead, disposable paper towels should be used.	All doctors and nursing staff
5	Use of sterile material in autoclaved drums and their validity.	Mrs. Pragati Hovale	Sterile material in autoclaved drums should be used within 72 hrs after autoclaving. If not used in 72 hrs, the drums should be sent for reautoclaving.	OT/ICU staff & their I/C
6	Appropriate use of cheatele forceps for taking out sterile material from autoclaved drums. Changing of Savlon solution for cheatele forceps.	Dr. Bapat	Savlon solution for cheatele forceps container should be prepared freshly on daily basis and should be changed daily. The container for savlon solution should be washed/disinfected daily before adding new savlon solution. The cheatele forceps should be autoclaved on daily basis.	OT/ICU/Ward in charge
7	Monthly swabs for Sterility testing of Operation theatres	Dr. Nakate	Swabs should taken from OT table, anesthesia machine, instrument trolley, headlamps, C-arm and other frequently touched surfaces by OT staff.	OT I/C

DEAN

			Swabs should not be taken from floor or walls as these areas carry little significance in transmission of infection.	
8	Isolation ward for infected patients.	Dr. Patil	For infective cases such as open cases of pulmonary TB, flu etc. where airborne transmission of infection is highly likely, a separate isolation ward should be started.	Hospital management
9	Hospital antibiotic policy	Dr. Kadam	All clinicians, surgeons, microbiologists and pharmacologists will discuss the issue and decide further steps for formulating an empirical antibiotic policy for BKLWRMC.	
10	The next HICC meeting was scheduled in the December, 2017.	Dr. Nakate

2. The agenda for present meeting was discussed by the secretary.
3. Following points were told by the secretary about **universal precautions**.
 - Universal precautions are intended to prevent the exposure of health-care workers and patients to bloodborne pathogens.
 - These must be practiced in regard to the blood and body fluids of all patients, regardless of their infection status.
 - **These include,**
 - Hand-washing before and after all medical procedures.
 - Safe handling and immediate safe disposal of sharps:
 - Not recapping needles

DEAN

- Using special containers for sharp disposals
 - Using needle cutter/destroyers
 - Using forceps instead of fingers for guiding sutures
 - Using vacutainers wherever possible
 - Safe decontamination of instruments.
 - Use of protective barriers whenever indicated to prevent direct contact with blood and body fluid such as gloves, masks, goggles, aprons, and boots.
 - A health care provider who has a cut or abrasion should cover the wound before providing care.
 - Safe disposal of contaminated waste.
4. Following points were discussed related to **needle stick injuries**.
- **Work practices increase the risk of needle stick injury.**
 - i. Recapping needles (Most important).
 - ii. Transferring a body fluid between containers.
 - iii. Failing to dispose of used needles properly in puncture-resistant sharps containers.
 - iv. Poor healthcare waste management practices.
 - **How to protect oneself from needle stick/sharps injuries?**
 - i. Avoid the use of needles where safe and effective alternatives are available.
 - ii. Avoid recapping needles.
 - iii. Plan for safe handling and disposal of needles before using them.
 - iv. Promptly dispose of used needles in appropriate sharps disposal containers.
 - v. Report all needle stick and sharps-related injuries promptly to ensure that you receive appropriate follow-up care.
 - vi. Participate in training related to infection prevention.
 - vii. Use devices with safety features provided by the institute (wherever possible).
 - viii. Record and monitor injuries with an injury register in each location of healthcare setting.
5. The chairperson told all the committee members to train the paramedical and nursing staff with regard to these precautions.
6. The next HICC meeting was scheduled in the June, 2017. In the end, the secretary thanked all the members for their valuable contributions and the meeting was concluded.

ALLOTMENT OF THEORY CLASSES

Sr. No.	Topic	Competencies	No. of Hours	Name of faculty
18	Biochemistry of cancer	BI10.1 Describe the cancer initiation, promotion oncogenes & oncogene Activation. Also focus on p53 & apoptosis BI10.2 Describe various biochemical tumor markers and the biochemical basis of Cancer therapy.	02	Miss. Poonam Kamble
19	Xenobiotics	BI7.5 Describe the role of xenobiotics in disease	01	Miss Monika Chavan
20	Mineral Metabolism	BI6.9 Describe the functions of various minerals in the body, their metabolism and homeostasis. BI6.10 Enumerate and describe the disorders associated with mineral metabolism.	04	
21	Water and Electrolyte Balance Acid base balance	BI6.7 Describe the processes involved in maintenance of normal pH, water & electrolyte balance of body fluids and the derangements associated with these. BI6.8 Discuss and interpret results of Arterial Blood Gas (ABG) analysis in various disorders.	02 02	Dr. Anup Nillawar Dr. Anup Nillawar
22	Molecular concept of body defence	BI7.6 Describe the anti-oxidant defence systems in the body. BI7.7 Describe the role of oxidative stress in the pathogenesis of conditions such as cancer, complications of diabetes mellitus and atherosclerosis.	02	Miss Monika Chavan
23	Immunity	BI10.3 Describe the cellular and humoral components of the immune system & describe the types and structure of antibody BI10.4 Describe & discuss innate and adaptive immune responses, self/non-self recognition and the central role of T-helper cells in immune responses. BI10.5 Describe antigens and concepts involved in vaccine development.	03	Miss Monika Chavan
24	Extracellular Matrix	BI9.1 List the functions and components of the extracellular matrix (ECM). BI9.2 Discuss the involvement of ECM components in health and disease. BI9.3 Describe protein targeting & sorting along with its associated disorders.	02 01	Dr. Anup nillawar Dr. Anup Nillawar
25	Biomedical waste	BI 11.1: Biomedical waste	01	Dr. Anup Nillawar
